

# Introduction to RDM and SQL

Day 4

# Day 4

- Subqueries
- Set Operators
- Conclusion

6  
5 SELECT [DISTINCT] Customer,  
COUNT(\*) AS Count  
1 FROM Orders  
2 WHERE OrderDate > '19650101'  
3 GROUP BY Customer  
4 HAVING COUNT(\*) > 1  
7 ORDER BY Count DESC  
8 OFFSET 0 ROWS FETCH NEXT 10 ROWS ONLY;

Order ID	Customer	Order Date
1	Dave	1/1/2018
2	John	2/1/2018
3	Gerald	3/1/2018
4	John	9/1/2018

# Subqueries

# Expression Subquery

Replace a constant or reference expression

Must return a set that consists of one row and one column

# Derived Tables and IN Lists

Can be used as table source in FROM clause

- Join aggregates to source rows

A list for IN predicates

- Returns one column, except for row value constructors

# Table Expressions

Can be used as table source in FROM clause.

Often used to Join aggregates to source rows.

# Correlated Subqueries

Not self-contained; Subquery references a column from the outer query

Typically used for expression sub queries, IN lists, and EXISTS

Correlated table expressions must use LATERAL

# Subqueries

# Set Operators

# Set Operators

- UNION
- INTERSECT
- EXCEPT
- ALL vs. DISTINCT

# Union vs. Join

**JOIN**

SET 1		

SET 2		

SET 1		

**UNION**

SET 2		

UNION

UNION  
ALL

INTERSECT

EXCEPT

EXCEPT

# Set Operators

# Conclusion

# Day 1

What are SQL, RDM, and RDBMS?

Development Environment

SQL Sublanguages

# Day 2

Query Logical Processing

The FROM Clause

The WHERE Clause

# Day 3

GROUP BY

HAVING

SELECT

Sorting

# Day 4

Subqueries

Set Operators

# Goals

- ✓ What the RDM, SQL, and RDBMS *really* are
- ✓ Understand SQL query processing
- ✓ Switch to a 'set mindset'
- ✓ Declarative vs. Imperative Programming
- ✓ Write basic SQL queries
- ✓ Solid foundation, less focus on detail and syntax
- ✓ Passion for RDM and SQL

# Course Evaluations

# What Next?

- Master the relational model
- Courses
- Books
- Product Documentation
